SUBJECT INDEX

Absolute distance interferometry, progress in, 368
Absolute distance interferometer, telescope alignment with the, 402
Active optics—don't build a telescope without it!, 252
Actuators, deformable mirror with combined piezoelectric and electrostatic, 260
Adaptive optics, modal control for wavefront reconstruction in, 269
Alignment with the absolute distance interferometer, telescope, 402
Aperture for brightness and velocity speckle interferometry measurements, one-dimensional telescope, 436
Array: astronomical goals and preliminary image reconstruction results, coherent optical system of modular imaging collectors (COSMIC) telescope, 164
Array, performance of the Multiple Mirror Telescope (MMT): VIII. MMT as an optical-infrared interferometer and phased, 57

Array, performance of the Multiple Mirror Telescope (MMT): X. The first submillimeter phased, 72
Array telescopes as a fifteen meter optical telescope equivalent, coherent, 411
Aspherics, generation of off-axis, 316
Astronomy from space, plans for a large deployable reflector for submillimeter and infrared, 151

Bandwidth segmented mirrors, experiments with high, 377
Beam expander consisting of multiple telescopes, interferometric control of a, 396
Blank manufacturing for the emerging market, mirror, 307
Brightness and velocity speckle interferometry measurements, one-dimensional telescope aperture for, 436

Calar Alto, tests and quality of the 3.5 meter primary mirror of the Max-Planck-Institut für Astronomie's telescope at, 294
Calibrating surface measuring machine, self-, 327
Coalignment system performance of the Multiple Mirror Telescope (MMT): VI. MMT telescope, 42
Coatings for ground-based astronomical instruments, development of high reflectance, 310
Coherent array telescopes as a fifteen meter optical telescope equivalent, 411
Coherent optical system of modular imaging collectors (COSMIC), conceptual design of a, 156
Coherent optical system of modular imaging collectors (COSMIC) telescope array: astronomical goals and preliminary image reconstruction results, 164
Collectors (COSMIC), conceptual design of a coherent optical system of modular imaging, 156
Collectors (COSMIC) telescope array: astronomical goals and preliminary image reconstruction results, coherent optical system of modular imaging, 164
Compensation performance, four-wave mixer phase, 276
Computer-controlled polishing of telescope mirror segments, 352
Computer systems, performance of the Multiple Mirror Telescope (MMT): IV. MMT, 24
Conceptual design of a coherent optical system of modular imaging collectors (COSMIC), 156
Console design: an example, new, 229
Control system for the University of California technical demonstration prototype, mirror, 382
Control for wavefront reconstruction in adaptive optics, modal, 269
Cryogenic testing of mirrors for infrared space telescopes, 413

Deflections of lightweighted mirrors, gravity, 424
Deflections on point supports, telescope mirror supports: plate, 212
Deformable mirror with combined piezoelectric and electrostatic actuators, 260
Deployable reflector for submillimeter and infrared astronomy from space, plans for a large, 151
Development of high reflectance coatings for ground-based astronomical instruments, 310
Dome induced image motion, 185

Effects of mirror surface ripple on image quality, 335
Effects of primary mirror segmentation on telescope image quality, 123
Electrostatic actuators, deformable mirror with combined piezoelectric and, 260
European Southern Observatory new technology telescope project, status of the, 90
Expander consisting of multiple telescopes, interferometric control of a beam, 396
Experiments with high bandwidth segmented mirrors, 377

Fifteen meter optical telescope equivalent, coherent array telescopes as a, 411
15 meter telescope, seeing and the design and location of a, 193
15 meters—similarities and differences, scaling the Multiple Mirror Telescope (MMT) to, 79
Four-wave mixer phase compensation performance, 276

Generation of off-axis aspherics, 316
Glass honeycomb mirrors, manufacture of large, 298
Good imaging with very fast paraboloidal primaries: an optical solution and some applications, 134
Gravity deflections of lightweighted mirrors, 424
Ground-based astronomical instruments, development of high reflectance coatings for, 310

High reflectance coatings for ground-based astronomical instruments, development of, 310
Honeycomb mirrors, manufacture of large glass, 298

Image motion, dome induced, 185
Image quality, effects of mirror surface ripple on, 335
Image quality, effects of primary mirror segmentation on telescope, 123
Image reconstruction results, coherent optical system of modular imaging collectors (COSMIC) telescope array: astronomical goals and preliminary, 164
Image shrinking in sub-arc second seeing at the MMT and 2.3 m telescopes, performance of the Multiple Mirror Telescope (MMT), 50
Imaging collectors (COSMIC), conceptual design of a coherent optical system of modular, 156
Imaging collectors (COSMIC) telescope array: astronomical goals and preliminary image reconstruction results, coherent optical system of modular, 164
Imaging with very fast paraboloidal primaries: an optical solution and some applications, good, 134
Infrared astronomy from space, plans for a large deployable reflector for submillimeter and, 151
Infrared interferometer and phased array, performance of the Multiple Mirror Telescope (MMT): VIII. MMT as an optical-, 57
Infrared performance of the University of California Ten Meter Telescope, 117
Infrared space telescopes, cryogenic testing of mirrors for, 413
Interferometer and phased array, performance of the Multiple Mirror Telescope (MMT): VIII. MMT as an optical-infrared, 57
Interferometer, telescope alignment with the absolute distance, 402
Interferometric control of beam expander consisting of multiple telescopes, 396
Interferometry measurements, one-dimensional telescope aperture for brightness and velocity speckle, 436
Interferometry, progress in absolute distance, 368
Interferometry and related techniques with advanced technology optical telescopes, speckle, 284

Kitt Peak National Observatory, remote observing experiments at, 238
Kitt Peak National Observatory, Stressed Mirror Polishing Experiment underway at, 357

Lightweighted mirrors, gravity deflections of, 424
Lightweighted mirrors, optimum shapes for, 419
Long-distance observing, remote operation of telescopes:, 243

Manufacture of large glass honeycomb mirrors, 298
Manufacturing for the emerging market, mirror blank, 307
Max-Planck-Institut für Astronomie's telescope at Calar Alto, tests and quality of the 3.5 meter primary mirror of the, 294
Metrology mount development and verification for a large spaceborne mirror, 440
Mirror blank manufacturing for the emerging market, 307
Mirror with combined piezoelectric and electrostatic actuators, deformable, 260
Mirror control system for the University of California technical demonstration prototype, 382
Mirror of the Max-Planck-Institut für Astronomie's telescope at Calar Alto, tests and quality of the 3.5 meter primary, 294

Mirror, metrology mount development and verification for a large spaceborne, 440
Mirror Polishing Experiment underway at Kitt Peak National Observatory, Stressed, 357
Mirror segmentation on telescope image quality, effects of primary, 123
Mirror segments, computer-controlled polishing of telescope, 352
Mirror supports: plate deflections on point supports, telescope, 212
Mirror surface ripple on image quality, effects of, 335
Mirror of the University of Texas 7.6 m Telescope, structural analysis of the, 206
Mirrors, experiments with high bandwidth segmented, 377
Mirrors, gravity deflections of lightweighted, 424
Mirrors for infrared space telescopes, cryogenic testing of, 413
Mirrors, manufacture of large glass honeycomb, 298
Mirrors, optimum shapes for lightweighted, 419
Mixer phase compensation performance, four-wave, 276
Modal control for wavefront reconstruction in adaptive optics, 269
Modular imaging collectors (COSMIC), conceptual design of a coherent optical system of, 156
Modular imaging collectors (COSMIC) telescope array: astronomical goals and preliminary image reconstruction results, coherent optical system of, 164
Motion, dome induced image, 185
Mount development and verification for a large spaceborne mirror, metrology, 440
Multiple Mirror Telescope (MMT): VIII. MMT as an optical-infrared interferometer and phased array, performance of the, 57
Multiple Mirror Telescope (MMT): to 15 meters—similarities and differences, scaling the, 79
Multiple Mirror Telescope (MMT): V. Pointing and tracking of the MMT, performance of the, 33
Multiple Mirror Telescope (MMT): IV. MMT computer systems, performance of the, 24
Multiple Mirror Telescope (MMT): IX. Doing science with the MMT, performance of the, 65
Multiple Mirror Telescope (MMT): I. MMT—the first of the advanced technology telescopes, performance of the, 2
Multiple Mirror Telescope (MMT): VII. Image shrinking in sub-arc second seeing at the MMT and 2.3 m telescopes, performance of the, 50
Multiple Mirror Telescope (MMT): VI. MMT telescope coalignment system, performance of the, 42
Multiple Mirror Telescope (MMT): X. The first submillimeter phased array, performance of the, 72
Multiple Mirror Telescope (MMT): III. Seeing experiments with the MMT, performance of the, 16
Multiple Mirror Telescope (MMT): II. Mechanical properties of the MMT, performance of the, 9
Multiple telescopes, interferometric control of a beam expander consisting of, 396

New console design: an example, 229

Observatory new technology telescope project, status of the European Southern, 90
Observatory, remote observing experiments at Kitt Peak National, 238
Observatory, Stressed Mirror Polishing Experiment underway at Kitt Peak National, 357
Off-axis aspherics, generation of, 316
One-dimensional telescope aperture for brightness and velocity speckle interferometry measurements, 436
Optical-infrared interferometer and phased array, performance of the Multiple Mirror Telescope (MMT): VIII. MMT as an, 57
Optical solution and some applications, good imaging with very fast paraboloidal primaries: an, 134
Optical system design study for the University of Texas 300-inch Telescope, 178
Optical system of modular imaging collectors (COSMIC), conceptual design of a coherent, 156
Optical system of modular imaging collectors (COSMIC) telescope array: astronomical goals and preliminary image reconstruction results, coherent, 164
Optical telescope equivalent, coherent array telescopes as a fifteen meter, 411
Optical telescopes, speckle interferometry and related techniques with advanced technology, 284
Optics—don't build a telescope without it?, active, 252
Optics, modal control for wavefront reconstruction in adaptive, 269
Optimum shapes for lightweighted mirrors, 419

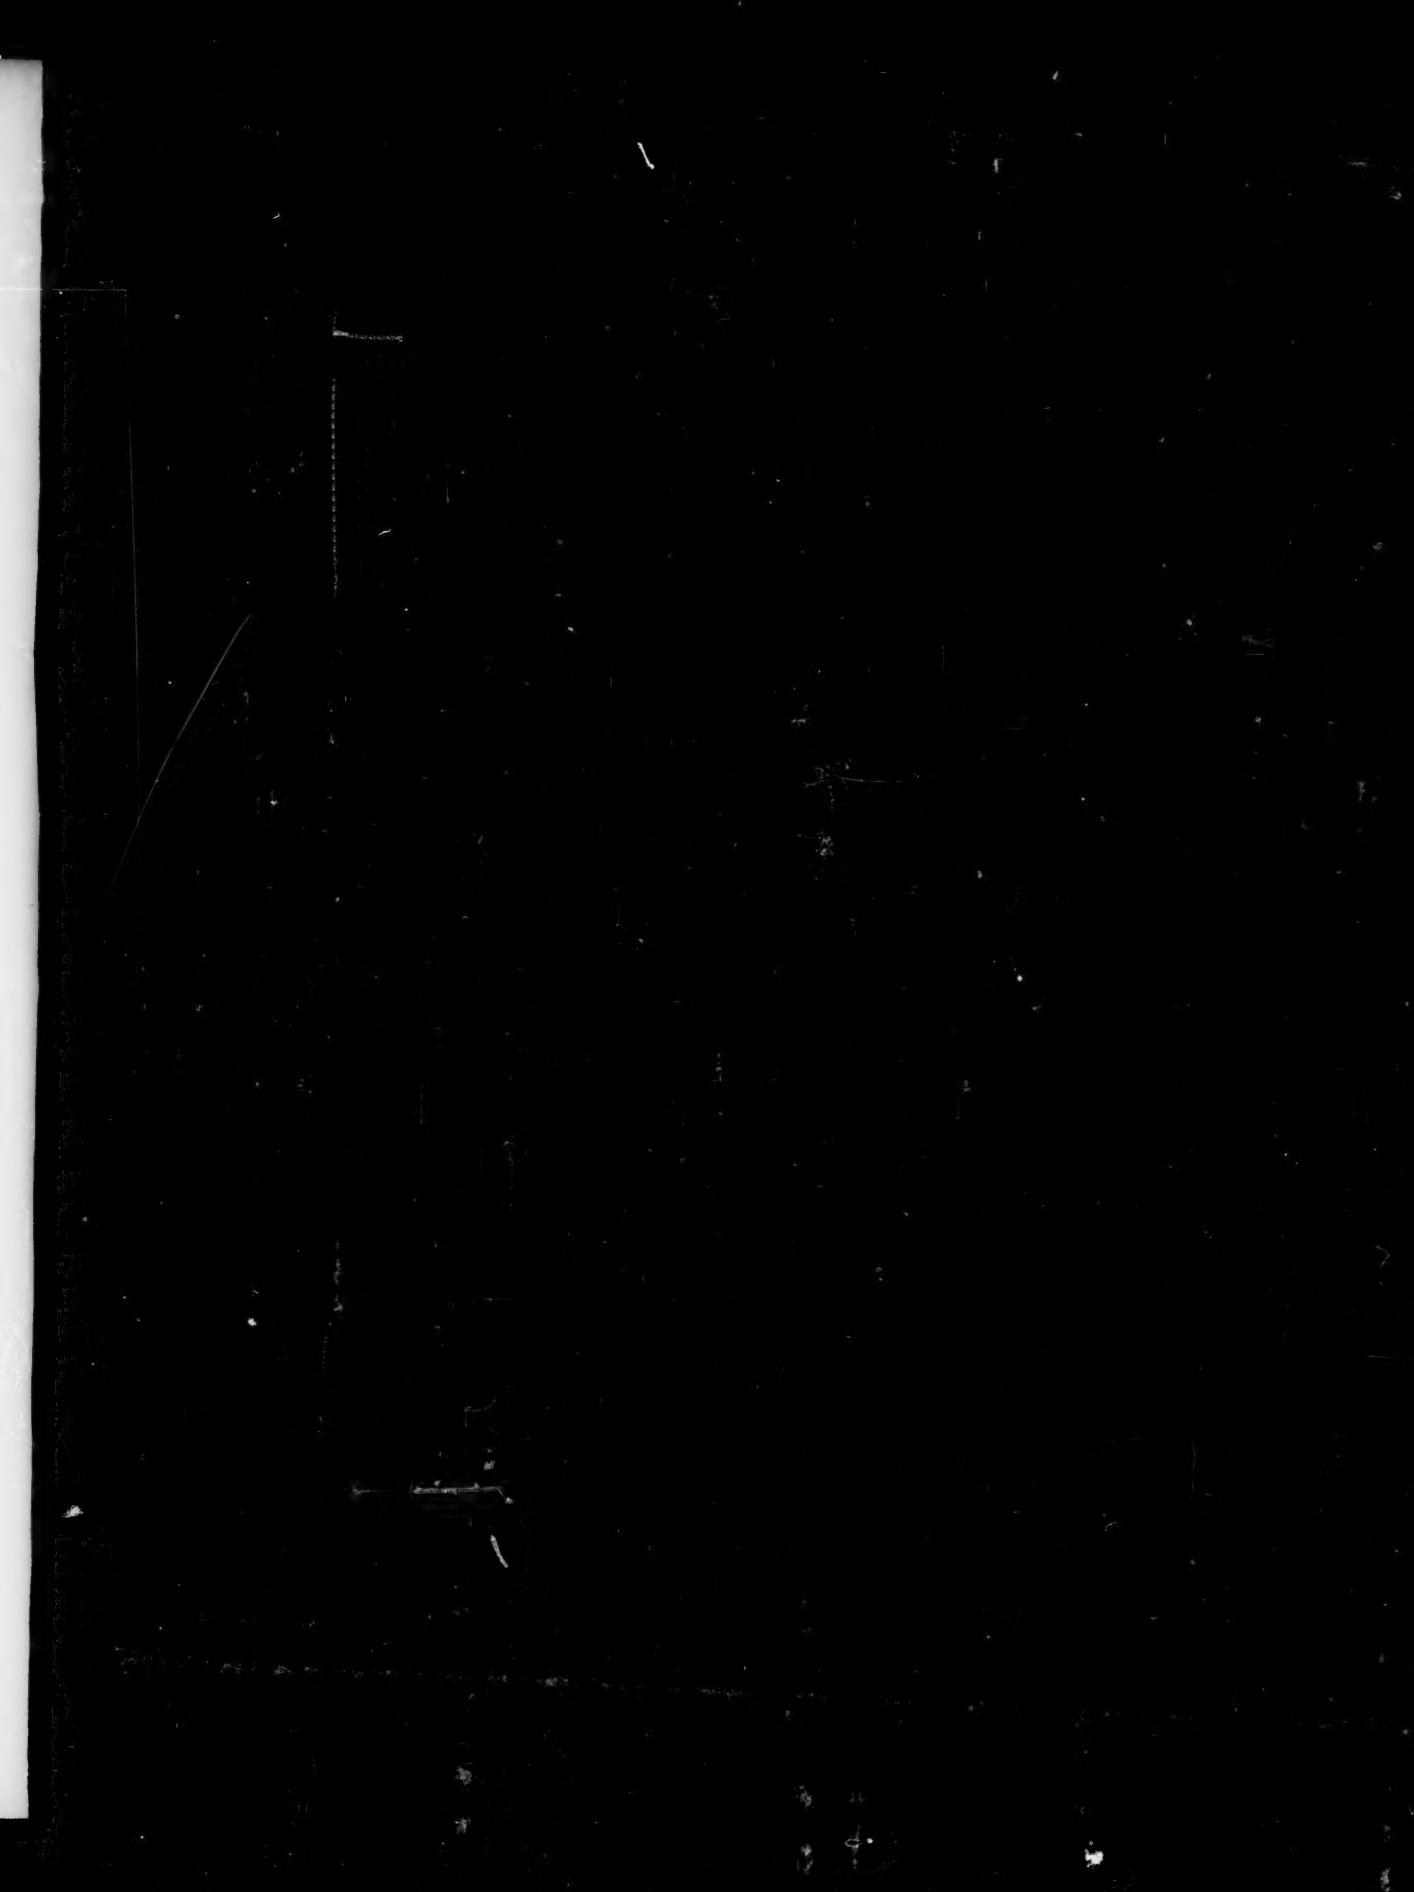
Paraboloidal primaries: an optical solution and some applications, good imaging with very fast, 134
Performance of the Multiple Mirror Telescope (MMT): VIII. MMT as an optical-infrared interferometer and phased array, 57
Performance of the Multiple Mirror Telescope (MMT): V. Pointing and tracking of the MMT, 33
Performance of the Multiple Mirror Telescope (MMT): IV. MMT computer systems, 24
Performance of the Multiple Mirror Telescope (MMT): IX. Doing science with the MMT, 65
Performance of the Multiple Mirror Telescope (MMT): I. MMT—the first of the advanced technology telescopes, 2
Performance of the Multiple Mirror Telescope (MMT): VII. Image shrinking in sub-arc second seeing at the MMT and 2.3 m telescopes, 50
Performance of the Multiple Mirror Telescope (MMT): VI. MMT telescope coalignment system, 42
Performance of the Multiple Mirror Telescope (MMT): X. The first submillimeter phased array, 72
Performance of the Multiple Mirror Telescope (MMT): III. Seeing experiments with the MMT, 16
Performance of the Multiple Mirror Telescope (MMT): II. Mechanical properties of the MMT, 9
Phase compensation performance, four-wave mixer, 276
Phased array, performance of the Multiple Mirror Telescope (MMT): VIII. MMT as an optical-infrared interferometer and, 57
Phased array, performance of the Multiple Mirror Telescope (MMT): X. The first submillimeter, 72
Piezoelectric and electrostatic actuators, deformable mirror with combined, 260
Plans for a large deployable reflector for submillimeter and infrared astronomy from space, 151
Plate deflections on point supports, telescope mirror supports: 212
Pointing and tracking of the MMT, performance of the Multiple Mirror Telescope (MMT): V., 33
Polishing of telescope mirror segments, computer-controlled, 352
Primary mirror of the Max-Planck-Institut für Astronomie's telescope at Calar Alto, tests and quality of the 3.5 meter, 294
Primary mirror segmentation on telescope image quality, effects of, 123
Primaries: an optical solution and some applications, good imaging with very fast paraboloidal, 134
Progress in absolute distance interferometry, 368
Prototype, mirror control system for the University of California technical demonstration, 382

Reconstruction in adaptive optics, modal control for wavefront, 269
Reconstruction results, coherent optical system of modular imaging collectors (COSMIC) telescope array: astronomical goals and preliminary image, 164
Reflectance coatings for ground-based astronomical instruments, development of high, 310
Reflector for submillimeter and infrared astronomy from space, plans for a large deployable, 151
Remote observing experiments at Kitt Peak National Observatory, 238
Remote operation of telescopes: long-distance observing, 243
Ripple on image quality, effects of mirror surface, 335

Scaling the Multiple Mirror Telescope (MMT) to 15 meters—similarities and differences, 79
Seeing and the design and location of a 15 meter telescope, 193
Seeing at the MMT and 2.3 m telescopes, performance of the Multiple Mirror Telescope (MMT): VII. Image shrinking in sub-arc second, 50
Segmentation on telescope image quality, effects of primary mirror, 123
Segmented mirrors, experiments with high bandwidth, 377
Segments, computer-controlled polishing of telescope mirror, 352
Self-calibrating surface measuring machine, 327
7.6 m Telescope, structural analysis of the mirror of the University of Texas, 206
7.6 Meter Telescope project, University of Texas, 102
Shapes for lightweighted mirrors, optimum, 419
Shrinking in sub-arc second seeing at the MMT and 2.3 m telescopes, performance of the Multiple Mirror Telescope (MMT): VII. Image, 50
Spaceborne mirror, metrology mount development and verification for a large, 440
Space, plans for a large deployable reflector for submillimeter and infrared astronomy from, 151
Space Schmidt telescope, 141
Space telescopes, cryogenic testing of mirrors for infrared, 413
Speckle interferometry measurements, one-dimensional telescope aperture for brightness and velocity, 436
Speckle interferometry and related techniques with advanced technology optical telescopes, 284
Status of the European Southern Observatory new technology telescope project, 90
Stressed Mirror Polishing Experiment underway at Kitt Peak National Observatory, 357
Structural analysis of the mirror of the University of Texas 7.6 m Telescope, 206
Sub-arc second seeing at the MMT and 2.3 m telescopes, performance of the Multiple Mirror Telescope (MMT): VII. Image shrinking in, 50
Submillimeter and infrared astronomy from space, plans for a large deployable reflector for, 151
Submillimeter phased array, performance of the Multiple Mirror Telescope (MMT): X. The first, 72
Submillimeter waves, 10 m telescope for, 409
Supports: plate deflections on point supports, telescope mirror, 212
Supports, telescope mirror supports: plate deflections on point, 212
Surface measuring machine, self-calibrating, 327
Surface ripple on image quality, effects of mirror, 335

Telescope alignment with the absolute distance interferometer, 402
Telescope aperture for brightness and velocity speckle interferometry measurements, one-dimensional, 436
Telescope array: astronomical goals and preliminary image reconstruction results, coherent optical system of modular imaging collectors (COSMIC), 164
Telescope at Calar Alto, tests and quality of the 3.5 meter primary mirror of the Max-Planck-Institut für Astronomie's, 294
Telescope coalignment system, performance of the Multiple Mirror Telescope (MMT): VI. MMT, 42
Telescope (MMT): VIII. MMT as an optical-infrared interferometer and phased array, performance of the Multiple Mirror, 57
Telescope equivalent, coherent array telescopes as a fifteen meter optical, 411
Telescope (MMT) to 15 meters—similarities and differences, scaling the Multiple Mirror, 79
Telescope (MMT): V. Pointing and tracking of the MMT, performance of the Multiple Mirror, 33
Telescope (MMT): IV. MMT computer systems, performance of the Multiple Mirror, 24
Telescope image quality, effects of primary mirror segmentation on, 123
Telescope, infrared performance of the University of California ten meter, 117
Telescope mirror segments, computer-controlled polishing of, 352
Telescope mirror supports: plate deflections on point supports, 212
Telescope, optical system design study for the University of Texas 300-inch, 178
Telescope project, status of the European Southern Observatory new technology, 90
Telescope project, University of California Ten Meter, 109
Telescope project, University of Texas 7.6 meter, 102
Telescope (MMT): IX. Doing science with the MMT, performance of the Multiple Mirror, 65
Telescope (MMT): I. MMT—the first of the advanced technology telescopes, performance of the Multiple Mirror, 2
Telescope, seeing and the design and location of a 15 meter, 193
Telescope (MMT): VII. Image shrinking in sub-arc second seeing at the MMT and 2.3 m telescopes, performance of the Multiple Mirror, 50
Telescope (MMT): VI. MMT telescope coalignment system, performance of the Multiple Mirror, 42
Telescope, Space Schmidt, 141
Telescope, structural analysis of the mirror of the University of Texas 7.6 m, 206
Telescope for submillimeter waves, 10 m, 409
Telescope (MMT): X. The first submillimeter phased array, performance of the Multiple Mirror, 72
Telescope (MMT): II. Mechanical properties of the MMT, performance of the Multiple Mirror, 9
Telescope without itl, active optics—don't build a, 252
Telescopes, cryogenic testing of mirrors for infrared space, 413
Telescopes as a fifteen meter optical equivalent, coherent array, 411
Telescopes, interferometric control of a beam expander consisting of multiple, 396
Telescopes: long-distance observing, remote operation of, 243
Telescopes, performance of the Multiple Mirror Telescope (MMT): I. MMT—the first of the advanced technology, 2
Telescopes, speckle interferometry and related techniques with advanced technology optical, 284
Telescopes, wind loading of large astronomical, 198
10 m telescope for submillimeter waves, 409
Ten Meter telescope, infrared performance of the University of California, 117
Ten Meter Telescope project, University of California, 109
Tests and quality of the 3.5 meter primary mirror of the Max-Planck-Institut für Astronomie's telescope at Calar Alto, 294
3.5 meter primary mirror of the Max-Planck-Institut für Astronomie's telescope at Calar Alto, tests and quality of the, 294
300-inch telescope, optical system design study for the University of Texas, 178
Tracking of the MMT, performance of the Multiple Mirror Telescope (MMT): V. Pointing and, 33

University of California technical demonstration prototype, mirror control system for the, 382
University of California Ten Meter Telescope, infrared performance of the, 117
University of California Ten Meter Telescope project, 109
University of Texas 300-inch Telescope, optical system design study for the, 178
University of Texas 7.6 Meter Telescope project, 102
University of Texas 7.6 m Telescope, structural analysis of the mirror of the, 206

Velocity speckle interferometry measurements, one-dimensional telescope aperture for brightness and, 436


Wavefront reconstruction in adaptive optics, modal control for, 269
Wind loading of large astronomical telescopes, 198
